

GSM Alarm System

Distributed hardware system for the implementation of centralized security system, which consists of a modem communication module, security module and keyboard.

GSM Alarm System

Modem communication module:

- Supports connection of up to 127 security modules;
- Data transmission via GPRS channel for cost efficiency;
- Transfer data over CSD in the case of unavailability of GPRS;
- Working with two SIM-cards;
- The redundant power supply.

EVERYTHING THAT HAS A BEGINNING HAS AN END

GSM Alarm System

Security modules:

- Connect up to 12 alarm loops;
- Control of open / short circuit alarm loops;
- Connect a separate keyboard independent from other security modules.
